

The PLO Show App — Quick Start

Log live PLO hands in seconds, track every session, and run the equity. Cash & tournament.

hands.theploshow.com

★ The one thing that works differently

You do **not** pick your seat first. You replay the table's action **in order** — starting with the first player to act — tapping what each player did. When the amber pointer reaches your spot, tap

This is me — [position] and enter your four cards. That's the whole trick.

Log your first hand

1. On the home screen tap **Cash Game** (or **Tournament**). Enter the venue, blinds, and table size, then **Start**.
2. On **New hand**, the blinds and stacks are pre-filled (100bb by default). For cash, pick a straddle if there was one — **No straddle / UTG / Button** — then tap **Start hand**.
3. The table appears with an **amber pointer** on the player to act. Tap what they did — **Fold**, **Call**, or **Raise** — going around the table. The app only offers the legal pot-limit options, so you can't mis-enter a raise size.
4. When the pointer reaches your seat, tap **This is me — [position]** and pick your four cards.
5. When the hand resolves, tap **Save hand**. You're dropped back on a fresh setup for the next one.

The whole hand, every time

Cash & **Tournament** Full hand

Every hand plays out completely. You're prompted for the flop, turn, and river cards as the streets come, then tap the **winning seat** at showdown. Didn't see a card? Cancel the picker — partial info is fine.

Tournament extras

Tournaments also capture the level, BB ante, and players-left (for ICM later). Cash hands capture straddles — UTG or button.

Handy controls

- **Undo** (top-right ↶) — removes the last action you entered.
- **\$ / BB** toggle (top-right) — show bets in money or in big blinds.
- **Save spot** — once the action reaches you, bank just your decision point mid-hand (for solver review) instead of playing it out.
- **Flag for review** — star a hand to find it again later.

After the hand

- **Hand list** — every hand with your net result (**green up** / **red down**). Tap one to **replay** it on the animated table.
- **Share / save a replay** — in the replayer, share a hand as a link (it replays on any phone, no app needed) or **Download an MP4/GIF clip** to post.
- **⋮ on a hand** → Export for review, or Delete (long-press also deletes).
- **Export for solver** (top-right ↑) — bundles the session's hands for the Backstage Pass solver.
- **All-in EV** — replay an all-in to the end to see each player's equity when the money went in, and your expected result next to what actually happened.
- **End** — closes out the session and asks for your cash-out; it stays in the **Tracker**.

Track every session

- Enter your **buy-in** when you start (tap **Add on** for rebuys) and your **cash-out** when you end — that's what your win rate is built from, whether or not you logged any hands.
- **Tracker** on the home screen: a **calendar** with hours and +/- for every day and a month ledger; **stats** — \$/hr, bb/hr, how sure that win rate is, a running total, and breakdowns by stakes, venue and day (tournaments: ROI and in-the-money).
- Played without the app? **Log session** adds it after the fact. PLO5 and mixed games can be tracked too.

Equity calculator

Tap **Equity** on the home screen. Pick **PLO** or **PLO5**, enter each player's cards (leave a hand blank for a random one) and a board if there is one. It's exact on the flop and turn and simulates preflop, and always tells you which.

The end game — your hands feed the solver

★ Why you're capturing

Every hand you log is **solver-ready**. The point isn't just a tidy history — it's to drop your **real** spots into a PLO solver and get back optimal strategy for the exact situations you face at your table. Two paths:

- **Export for solver** (a session's ↑ button) bundles your completed hands into population frequencies the solver reads.
- **Save spot** → **Copy spot JSON** sends a single decision straight into the solver's **Import Hand** for a one-off GTO answer.

Capture now, solve later — the data is built to load in directly, with no re-entry.

Install it on your phone

Open hands.theploshow.com in **Safari** (iPhone) or **Chrome** (Android) → **Share** / ⋮ → **Add to Home Screen**. It launches full-screen like a native app.

Goal: a logged hand takes about **15 seconds** of quiet tapping. · Your sessions and hands are stored **on that device** — there's no login or cloud sync yet, so clearing the browser's data clears them. **Tracker** → ⋮ → **Download backup** saves everything to a file you can restore later.
